dimension deck

elevator pitch

The Mission
Play as a dimensional jumper restoring a fracturing reality.

The Hybrid
Blends the top-down structure of The Binding of Isaac with the deck management of Slay the Spire.

Core Twist
Real-time combat using cards instead of traditional weapons.

game loop

the run

Navigate procedurally generated maps with randomized rooms and boss encounters.

permadeath

When a player dies, their current deck is lost, requiring a fresh start for the next attempt.

meta

Despite losing the deck, specific resources are retained to purchase permanent upgrades at a central HUB.

growth

Persistent Growth: These HUB upgrades ensure long-term empowerment by expanding stats and maximum card capacity.

environments

Procedural generation ensures no two runs are the same, shifting themes and obstacles constantly.

challenge

As the player's deck capacity grows, enemies gain "Card Resistance," forcing players to adapt their tactics.

card mechanics

combat sctructure

real-time integration

Combat is entirely card-based and happens in real-time.

balance

Players must manage movement and aiming while simultaneously managing their deck.

card types

active cards

- Function: Manually triggered by the player for direct attacks, area damage, or high-cooldown healing.
- Capacity: Starts with 3 slots, expandable up to 5 through meta-progression.
- Cooldown: Once used, cards enter a discard pile and take several seconds to return to prevent spamming.

automatic cards

- Function: "Trigger-based" cards that activate without player intervention when specific conditions are met.
- Capacity: Supports between 4 to 8 cards.
- Examples: Granting a buff when entering a boss room or creating a defensive explosion when taking critical damage.

card design

advanced mechanics

synergy system

- Strategic Interaction: Damage can be significantly boosted by combining card effects.
- Example: Applying "Oil" with an automatic card and following up with a "Fire" active card triples the resulting damage.

acquisition

- Exploration: Cards are found scattered throughout the procedural worlds.
- Commerce: Cards can be purchased using credits at the "Dimension Store."

difficulty scaling

- Card Resistance: As the player increases their deck capacity, enemies gain resistance, forcing constant tactical adaptation.

table of content

style

- RETRO STYLED PIXEL ART
- FLUID ANIMATIONS

dynamic palettes

- VISUAL COLORS SHIFT BASED ON THE CURRENT DIMENSION

environments

- OLD WEST
- DARK AGES

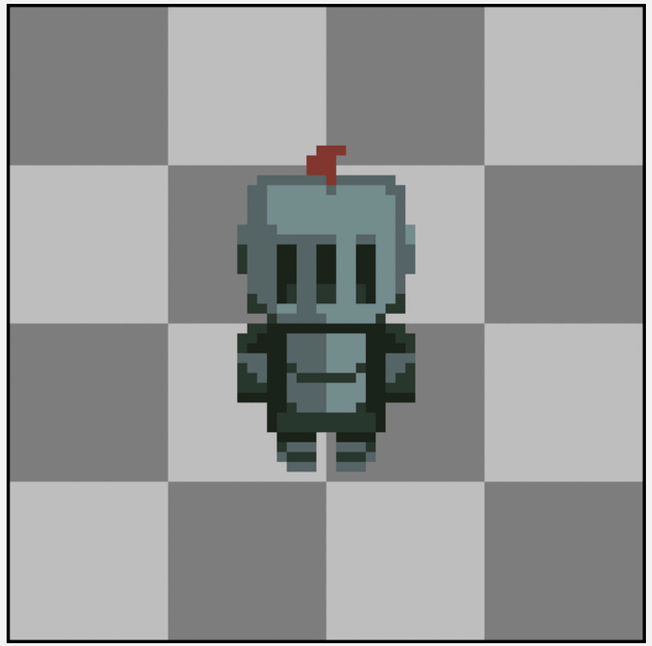
32 x 32 px

charachter changes design
depending on the world



rooms

480 x 352 resolution ratio

Dimensions in Pixels: 480 x 352

Dimensions in Tiles: 15 tiles wide by 11 tiles high

enemies

dimensions depends on the kind of enemie

rats: 16 x 16 px

enemy design changes
depending on the world

Telemetry and Balancing

PLAYER PERFORMANCE TRACKING

Monitoring run duration and the highest biome reached to identify difficulty spikes.

WIN/LOSS ANALYTICS

Recording the frequency of "Game Over" vs. "Victory" screens to gauge overall game accessibility.

CARD AND TRIGGER USAGE

Analyzing which active cards are chosen most often and which automatic "triggers" are most effective in combat.

ECONOMIC BALANCING

Logging "Dimensional Credit" earnings to see if players prioritize new cards, shop items, or permanent HUB upgrades.

DYNAMIC SCALING

Using collected data to fine-tune "Card Resistance," ensuring enemies stay competitive as the player's deck grows.
